

S.W.I. Steeringwheel interface

S.W.I. Steeringwheel Interfaces (Group 27)

These Interfaces make it possible to connect an aftermarket Radio & Navigation and make your OEM steeringwheel control work.

We advise that these Interfaces will only be installed by professional specialists.

Before ordering please consult our documentation and check the connection in the car. Never change the wires by hand. The TCP interfaces are tested for 100% functionality with the mentioned models. It is possible that a manufacturer has changed the CanBus software. For example: the Comfort CanBus has to be set to non active for cars not delivered with an original radio.

Tips:

- De-activate the installed radio manual before pulling out the ignition key.
- Install your interface and the new Radio/ Navigation.
- Turn your ignition key to the accessories position and wait a 15 – 20 seconds to activate the CanBus so the Comfort CanBus can recognize the new Interface.

After 15-20 seconds turn on the Radio-Navigation manually. The Interface and CanBus will make your steeringwheel control work.

Never cut any wires and never put any more users onto the power supply of these interfaces. If so all guarantee will expire.

In the case of a non working interface please contact support@tomacarparts.nl .

Despite the great precision that TCP has taken into account while making this documentation the changes within the cars never stop. *That is why TCP will not take any responsibility what so ever concerning the connecting contacts.*

Always check the connections before installing!
