Ideal for TV and Radio sports reporting, ScoopTeam is a **commentary unit integrating a codec** for live transmission of one or two audio signals in **high audio quality (up to 20 kHz bandwidth)**.

The **two audio channels** can be set with a **single destination** (transmission in "dual mono" format), **or two separate destinations** (double codec).

ScoopTeam mainly targets **IP networks**, but it can also use an ISDN line. **Alternative transmission modes are available as options**: AoIP over 3G/4G, Wi-Fi by USB, and mobile voice (including HD Voice capability).

Moreover, the premium version allow you to transmit via a Ravenna Interface (AES67, Dante compatible) and offers two additional analogs inputs and one AES input.

ScoopTeam features **many coding algorithms**. Their availability depends on the configuration for transmission: network used and single/double codec mode. (See inside for details)

The interface is as simple to use as possible, with **assignable buttons and knobs** for settings and volume adjustments.
